Introduction to Mid Iowa Tools/McNeal Tool Company/Metro Tool & Abrasives Web Site

We are pleased to announce that our website has been re-designed to provide updated and comprehensive information at the [Mid Iowa Tools Web site](#).

How is the site organized?

The site is organized along five main areas:

1. MIT is divided into Divisions, representing the core competencies of that specific Division i.e. Metalworking Tools (Mid Iowa Tools and Metro Tool & Abrasives), Precision Measuring Instruments (McNeal Tool Company) Compressed Air Division [CAD] (Mid Iowa Tools), Abrasives (Mid Iowa Tools and Metro Tool & Abrasives) and Value Added Services. Each core competency has a home page with links to related information, services and products.
2. The core of Mid Iowa Tools appears in the Value Added Services homepage and outlines special services we provide our customers.
3. Technical information will be added shortly to the individual core competency homepages to provide the latest information on machining, grinding and dimensional metrology. This area will be a place to look for technical help for your applications. As always, this information will also be available from our Field Application Engineers (FAE's) and can be accessed by contacting your specific FAE for assistance at your facility.

In addition, each page on our site has three important features:

1. A search function is available on the site and allows customers to search for specific information on our site, or to search for information on the web via Google search.
2. Customers now have the ability to request a quote/proposal via each homepage in the upper right hand corner of the page. RFQ's submitted in this format will be received via email and returned via email unless otherwise specified.
3. Customer specific information i.e. sales and usage analysis, service records etc. is located in a secure area that is password protected. Information located in this area is developed and available for your use based on your requirements. Contact Joel Weber for username and password authentication.
Also, subscription to our Quarterly Newsletters is available on our RFQ page. If you would like to receive our Newsletters, please go to the RFQ section and fill out your contact information and check the newsletter box.

If you have a question and feel that you want to ask a person, use our Contact Us tab located on the bottom of each page.
